

Petition

for food without radioactive contaminants

International campaign :
No radioactivity in our food

I oppose the international standards projects (*) that are about to authorise the trade and consumption of foodstuffs polluted by radioactive contaminants such as plutonium 239, iodine 131, caesium 137 or strontium 90

Ingestion of these artificial radionuclides will result in increased cancer risks and genetic diseases (not to mention others health effects, especially heart troubles and damages to immune, digestive and respiratory systems)

If implemented, new international regulations will expose consumers, and specially young ones, to unacceptable risk levels.

We are not to tolerate polluted food in normal situations.

Consumption of food contaminated by artificial radionuclides must not be accepted unless there is no way out, for example in post-accidental or post-terrorism circumstances, and, even then, only for a limited period.

I refuse the new regulations. I want pollutants-free food to remain the norm. That is the reason why I ask CRIIRAD to take all necessary steps at national and international levels to prevent such a noxious food to enter my diet.

(*) 1/ 2005 draft recommendations of the International Commission for Radiological Protection (ICRP)
2/ New standards project of the Codex Alimentarius Commission (FAO/WHO-UN)
